

## TOSHIBA Ranking = 3/10

Despite some models of laptops produced without brominated flame retardants (BFRs) and EcoMark-certified products without polyvinyl chloride (PVC), Toshiba has not committed to eliminating all uses of PVC and BFRs. The company also loses points on product take back and recycling.

### Ranking criteria explained

The ranking criteria reflect the demands of the Toxic Tech campaign to the electronics companies. Our two demands are that companies should:

- clean up their products by eliminating hazardous substances;
- takeback and recycle their products responsibly once they become obsolete.

The two issues are connected. The use of harmful chemicals in electronics prevents their safe recycling when the products are discarded. Companies scored marks out of 30 this has then been calculated to a mark out of 10 for simplicity.

### TOSHIBA Overall Score

	<b>BAD (0)</b>	<b>PARTIALLY BAD (1+)</b>	<b>PARTIALLY GOOD (2+)</b>	<b>GOOD (3+)</b>
Precautionary Principle				
Chemicals Management				
Timeline for PVC phaseout				
Timeline for BFR phaseout				
PVC-free and/or BFR-free models (companies score double on this criterion)				
Individual producer responsibility				
Voluntary takeback				
Information to individual customers				
Amounts recycled				

## TOSHIBA Detailed Scoring

Chemical Score	BAD	PARTIALLY BAD	PARTIALLY GOOD	GOOD
Precautionary Principle		Mention of precautionary approach only with reference to the Global Compact. <b>More information</b>		
Chemicals Management				Toshiba has Green Procurement Guidelines for suppliers and ranks suppliers. <b>More information</b>
Timeline for PVC phaseout	No commitment to eliminating all PVC			
Timeline for BFR phaseout	No commitment to eliminating all BFRs			
PVC-free and/or BFR-free models (companies score double on this criterion)		Toshiba make a range of notebook PCs including the 'Dynabook', 'Satellite', 'Tecra' and 'Portege' models which have circuit boards free of halogens and antimony. Toshiba also make EcoMark-certified products, some of which do not contain PVC. <b>More information</b> <b>Green procurement</b>		

EPR/recycling score	BAD	PARTIALLY BAD	PARTIALLY GOOD	GOOD
Support for Individual Producer Responsibility	No reference to Toshiba's support for individual producer responsibility.			
Provides voluntary takeback where no EPR laws exist		Toshiba claim to be establishing voluntary takeback and recycling systems in North America, China and elsewhere in the world. <b>More information</b> <b>Recycling</b> <b>Toshiba trade-in program</b>		
Provides info for individual customers on takeback in all countries where products are sold	No information for individual customers on what to do with their discarded Toshiba products.			
Reports on amount of waste electrical and electronic equipment (WEEE) collected and recycled			Toshiba provides information on recycling of home appliances and PCs in Japan, but only in Japan. <b>More information</b> <b>Increasing the Amount of End-of-Use Products Recycled</b> <b>Also information</b>	

## Toxic chemicals criteria

Greenpeace wants to see electronics companies clean up their act.

Substituting harmful chemicals in the production of electronics will prevent worker exposure to these substances and contamination of communities that neighbour production facilities. Eliminating harmful substances will also prevent leaching/off-gassing of chemicals like brominated flame retardants (BFR) during use, and enable electronic scrap to be safely recycled. The presence of toxic substances in electronics perpetuates the toxic cycle – during reprocessing of electronic waste and by using contaminated secondary materials to make new products.

Until the use of toxic substances is eliminated, it is impossible to secure 'safe' recycling. For this reason, the points awarded to corporate practice on chemicals (five criteria, double points for PVC – and BFR-free models) are weighted more heavily than criteria on recycling, because until the use of harmful substances is eliminated in products, it is impossible to secure 'safe', toxic-free recycling.

### The electronics scorecard ranks companies on:

#### Chemicals policy and practice (5 criteria)

1. A chemicals policy based on the Precautionary Principle
2. Chemicals Management: supply chain management of chemicals via e.g. banned/restricted substance lists, policy to identify problematic substances for future elimination/substitution
3. Timeline for phasing out all use of vinyl plastic (PVC)
4. Timeline for phasing out all use of brominated flame retardants (not just those banned by EU's RoHS Directive)
5. PVC- and BFR-free models of electronic products on the market.

#### Policy and practice on Producer Responsibility for taking back their discarded products and recycling (4 criteria)

1. Support for individual (financial) producer responsibility – that producers finance the end-of-life management of their products, by taking back and reusing/recycling their own-brand discarded products.
2. Provides voluntary takeback and recycling in every country where it sells its products, even in the absence of national laws requiring Producer Responsibility for electronic waste.
3. Provides clear information for individual customers on takeback and recycling services in all countries where there are sales of its products.
4. Reports on amount of waste electrical and electronic equipment (WEEE) collected and recycled.

**Ranking regrading:** Companies have the opportunity to move towards a greener ranking as the guide will be updated every quarter. However penalty points will be deducted from overall scores if Greenpeace finds a company lying, practising double standards or other corporate misconduct.

**Disclaimer:** Greenpeace's 'Guide to Greener Electronics' aims to clean up the electronics sector and get manufacturers to take responsibility for the full life cycle of their products, including the electronic waste that their products generate. The guide does not rank companies on labour standards, energy use or any other issues, but recognises that these are important in the production and use of electronics products.
