

Global Warming

Just hours after the McCain campaign announced that Alaska Gov. Sarah Palin would be the GOP vice presidential nominee, Palin told *Newsmax* she doesn't believe in man-made global warming, a position that puts her out of touch with both McCain, the Bush administration, and the scientific consensus.

What is your take on global warming and how is it affecting our country?

A changing environment will affect Alaska more than any other state, because of our location. I'm not one though who would attribute it to being man-made. (http://www.newsmax.com/headlines/sarah_palin_vp/2008/08/29/126139.html)

Oil

Palin is a strong proponent of oil drilling, regardless of its environmental consequences. She supports drilling in the Arctic National Wildlife Refuge and in offshore beluga whale¹ and polar bear habitat. Polar bears in Alaska already have been observed drowning and cannibalizing each other due to the melting of their sea ice habitat. The Southern Beaufort Sea population of polar bears off Alaska's north coast has already declined by 17 percent.

Palin has proposed giving an Italian oil company a major financial break on its planned Beaufort Sea oil field.²

"When I look every day, the big oil company's building is right out there next to me, and it's quite a reminder that we should have mutually beneficial relationships with the oil industry," Palin said.³

Endangered Species

Under Palin's leadership, the State of Alaska filed suit against the Department of Interior to undo the listing of the polar bear as threatened, even though polar bears are under extreme threat due to the melting of sea ice from global warming and expanding oil drilling activities.⁴

Palin also opposed listing beluga whales, which are threatened by seismic testing and potential oil spills.⁵ The governor endorses and defends the aerial shooting of wolves and bears in her state. The practice chases the animals until they are exhausted and recently included the slaughter of 14 wolf pups in their den. Mining

The Pebble Mine project — proposed by foreign mining companies Anglo-American and Northern Dynasty — would build one of the world's largest gold and copper mines in southwest Alaska. Pebble Mine would sit at the headwaters of two major rivers that drain into Bristol Bay, America's most productive salmon fishery. Even without a major disaster in the earthquake-prone region, the toxic chemicals that would be used in the mining process pose a major threat to salmon by interfering with their ability to migrate.⁶ Palin opposed a ballot measure that would have prohibited mines that contaminated salmon streams.
