

# OCEAN ZONES

Marine life in the Arctic is fascinating, mysterious, and important to protect! Cut and paste to organize the animals below by the ocean zone that they live in:

**Sunlit Zone:** The only zone with enough sunlight for plants and algae to grow.

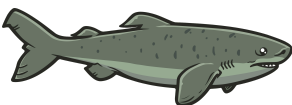

**Twilight Zone:** It's very blurry and dim here so animals have to be great hunters.

**Midnight Zone:** It is pitch black and freezing cold here. The only light comes from "bioluminescence," which is when animals make their own glowing light.

**SUNLIT ZONE**  
0-200m

**TWILIGHT ZONE**  
200-1,000m

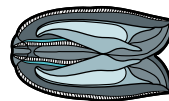

**MIDNIGHT ZONE**  
1,000 - 4,000m

Greenland Shark

Bowhead Whale

Comb Jellies

Polar Bears

Walrus

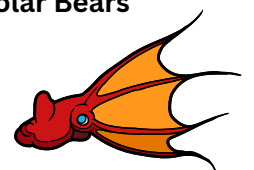

Narwhal

Arctic Squid

Anglerfish

Vampire Squid
